

THE CHUWANDONG HOUND

A breed that has been formed by the environment over more than 2000 years! Hand in hand with natural selection, the only criteria being that they remain 'Fit for purpose' it's single sparse coat that does not shed, makes it a truly hypoallergenic breed. With pricked ears, erect tail and black tongue the Chuandong looks like no other breed!

From statues and remains found in tombs that have been dated to the 'Han Dynasty' (206 B.C.) The Chuandong Hound has survived more than 2,000 years through to the present day.

The dogs are still highly valued by their owners in rural China as a scent hunting hound which is keeping the breed 'Fit for Purpose'

We are lucky to have these unique dogs that closely resemble the ancient statues and fit beautifully into 21st Century life.

First introduced in 2016 by Alison Darley [Cymrygold Kennels] there are less than 40 Chuandong Hounds in the U.K. (Sept 2021) 'Cymrygold' is the only Chuandong Hound Kennel outside of China.

We will continue to select dogs from rural areas that are as close as possible to the ancient statues, giving the Chuandong Hound the strongest possible foundation in the U.K. Enabling us to offer dogs that are healthy, fit, loyal and loving family companions with a Lifespan of 16 to 20 years!

We are encouraging people to help promote the breed's intelligence and train ability by using their Chuandong's for various activities including Agility, scent work and Mantrailing.

As a breed the Chuandong is very loyal in the home situation making alert house dogs, they enjoy contact with all family members especially the Children who they adore, they are extremely tactile dogs that love cuddles.

This exceptional character makes them popular as visitors in care homes.
